Set Apart
FOOD-LABEL GUIDANCE · TESTING ALPHA

Your first label. Your most useful feedback.

A one-page guide for Dave and the testing group.

01 · Open and begin

Open the introduction link below, choose **Open the app**, then **Get Started** if this is your first visit.

02 · Use manual entry

Choose **Enter Ingredients Manually**. Type or paste the **full ingredient statement**, including bracketed sub-ingredients. A “Contains” allergen statement is not the full list.

03 · Read the explanation

Tap **Analyze Ingredients**. Read the reasons and unresolved ingredients, not only the colored badge. UNKNOWN never means clean.

04 · Check your preferences

Strict Mode: recognized ambiguous ingredients may become NOT CLEAN as an avoidance preference, not proof of source. UNKNOWN stays unresolved.

Save Scan History: on this device only. Turning it off stops new history; it does not delete existing entries. Clearing browser storage may remove local history.

05 · Complete the loop

Open **Tester Guide & Resources** from Home or Settings. Use **Prepare Feedback**, then share the note with your inviter. Nothing is submitted automatically.

Try these checks · Strict Mode OFF

`water, carrots, salt` → **CLEAN** for that text only.
`pork` → **NOT CLEAN** under current rules.
`oats, natural flavors, salt` → **DISCERN**.
`water, xyzzy extract` → **UNKNOWN** (synthetic test input).

Send useful feedback

Device/browser • full input • expected vs. actual result • Strict Mode on/off • steps • screenshot. Leave out private information. Screenshots should not expose personal browser tabs or notifications.

Know the boundaries

Barcode lookup and photo OCR are demos. Use manual entry for your own label. Coverage is narrow; many real labels will be UNKNOWN. This is not medical or allergy guidance.

Begin here: tradian.github.io/SetApartApp/welcome/
Free testing alpha. No active subscriptions. Guidance, not certification or allergy advice.
